

Specified Fittings

Smooth-Flow™ Tees & Wyes:

Smooth-Flow Wye

Smooth-Flow Tee

Better Quality for Your Customer!

Specified Fittings uses a process in which we pull a hole through the wall of the mainline pipe. This method leaves a lip that is then fused using standard butt fusion procedures to the proper sized outlet. Available in sizes 6"x4" through 63"x48"!

Outlets are put on with a true butt fusion joint, not sidewall fused. Joint quality is much better than a sidewall fuse. No sidewall fusion = Better Quality!

Smooth, radius transition on the ID from the main to the outlet pipe.

Save time and space in the field—fewer field fusions and shorter lay lengths.

Available with mainlines up to 63" and outlets to 48".

Cost savings! No need to use size on size tees and reducers for large diameter reducing tees.

We fabricate them in IPS and DIPS in all DRs. They are AWWA C906 compliant and are available with Factory Mutual (FM) certification upon request.
